Incident report

Incident ID `portscan_demo` · generated 2026-10-18 19:41:48 UTC+04:00 by the Deception Platform

Incident: 10.10.10.10 Medium

Stage reached: reconnaissance · **Confidence:** 95% · **Techniques:** T1595.001, T1595

1. Summary

10.10.10.10 sent 3,952 bare SYNs to 1,996 ports in 16 seconds, sequentially probing honeypot services without completing any application session. Pure SYN port scan; no credential or web activity observed.

2. Timeline

Time (local)	Event
2026-10-13 15:33:24 UTC+04:00	Capture started (first packet on the lab network)
2026-10-13 15:33:24 UTC+04:00	First packet from 10.10.10.10
2026-10-13 15:33:40 UTC+04:00	Last packet from 10.10.10.10 in this capture

3. Attacker profile

Property	Observed (recomputed from the pcap)
Source IP	10.10.10.10
Targets	10.10.10.1
Activity window	2026-10-13 15:33:24 UTC+04:00 to 2026-10-13 15:33:40 UTC+04:00 (16 s)
Packets sent	3,973
New connection attempts (bare SYN)	3,952 to 1996 distinct ports
Most probed ports	8080 (5), 21 (2), 554 (2), 445 (2), 1720 (2), 25 (2), 1025 (2), 993 (2)
HTTP requests	0
SSH client banner(s)	none
HTTP user agents	none

4. Proof

Computed from the capture and honeypot logs, independent of the analysis text above.

First packets from the attacker (raw tshark output):

```
3 0.000716800  10.10.10.10 â†’ 10.10.10.1   ICMP 98     Echo (ping) request  id=0x45cf, seq=1/256, ttl=64
5 1.001557200  10.10.10.10 â†’ 10.10.10.1   ICMP 98     Echo (ping) request  id=0x45cf, seq=2/512, ttl=64
9 5.842533900  10.10.10.10 â†’ 10.10.10.1   TCP 74 40056 2222   40056 â†’ 2222 [SYN] Seq=0 Win=64240 Len=0

Len=0 TSval=3931843347 TSecr=11520470
```

No honeypot session or request is attributed to this source: the capture shows connection attempts only. Honeypot logs show the Docker gateway as the source address because Docker relays published ports; the pcap is the source of truth for the attacker IP.

5. MITRE ATT&CK mapping

Technique	Name	Tactic
T1595.001	Scanning IP Blocks	Reconnaissance
T1595	Active Scanning	Reconnaissance

Evidence cited by the analysis agent:

- 3,952 bare SYNs to 1,996 distinct ports in 16 s
- Open ports answered: 8080, 21, 2222, 4445, 23, 135
- No payload packets from source; zero HTTP requests
- No logins or application sessions in capture or logs

6. Response taken

No decoy was spawned for this incident.

Recommended decoys by the analysis: ftp_decoy, admin_panel_decoy. The controller only starts templates from a fixed allowlist.

7. Recommendations

- Rate-limit or block the scanning source at the perimeter; expose only the services that must be reachable; keep honeypots on addresses no legitimate user needs.

8. Indicators of compromise

Type	Value
IPv4	10.10.10.10
Targeted port	8080
Targeted port	21
Targeted port	554
Targeted port	445
Targeted port	1720

Evidence integrity

Capture file	SHA-256
portscan_first4000.pcap	963b29474abcb06bdc6010d738e1cd674274b53fc0ade4c12ccb01a16cf0b1d2

Method and limits

- The analysis agent (Claude, read-only Wireshark tools) proposed these findings; the validator confirmed the schema, that the attacker IP appears in the capture, and that decoys are on the allowlist.
- Counts in sections 3 and 4 were recomputed from the capture and logs for this report.
- Captured content is attacker-controlled and is shown as escaped text only.
- Limits: lab network, a single capture window, simple attacks; confidence values are the agent's own estimate.
